Research/Clinical Interest

Jeannie's research interest is in the adaptation of internationally adopted children and their families. She is interested in risk and protective factors (resiliency) and physical growth and nutrition.

Personal statement about LECHN

I feel very privileged to be a fellow in the LECHN program. I chose to apply to the program because of my interest in child health and education. The LECHN program has given me the opportunity to network with others with similar interests in nursing and other disciplines. LECHN has offered opportunities above and beyond the typical PhD program offered at UAB. The opportunity to take courses specific to pediatrics and education has given me an advantage over other PhD students in my field.
