

Slideshow CK allows the functionality to display a slideshow of images or videos.

Features:

- User interface supports browse/upload, as well as drag /drop to the upload interface.
- May include a link on each slide.
- May include a caption on each slide.
- May order slides or have them displayed randomly.
- Compatible with responsive design (mobile devices) if properly configured.

### How to insert a slideshow image:

1. Navigate to [Extensions>Module Manager](#). Click on the [New](#) icon. Select [Slideshow CK](#) as the module type.
2. Under [Details](#), give the new slideshow a [Title](#). Choose the [Hide](#) radio button to not display the title. Select the [Position](#) you would like the slideshow displayed (in this example, choose banner).

The screenshot shows the 'Details' configuration panel for the Slideshow CK module. It includes a text input for 'Title' containing 'Mellisa's Banner', radio buttons for 'Show Title' with 'Hide' selected, and a dropdown for 'Position' set to 'banner' with a 'Select position' button.

3. Under the [Slides Manager](#), click on the "Select an image" button.

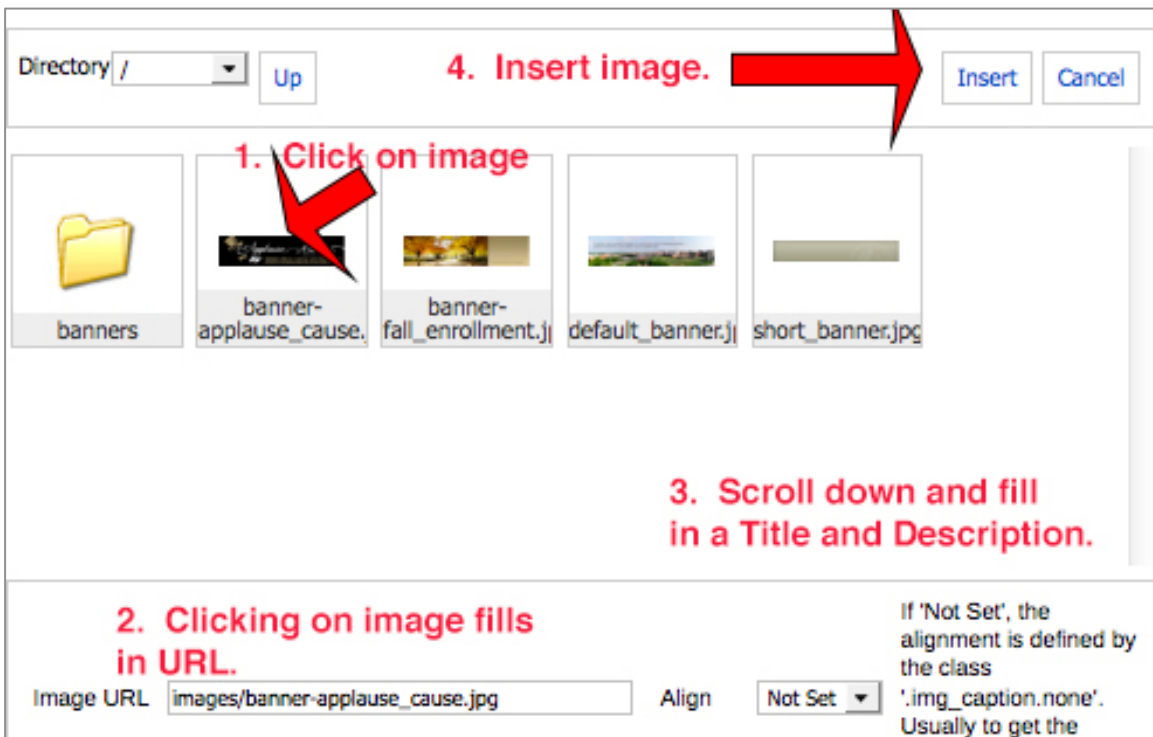

The screenshot shows the 'Slides manager' interface. It features an 'Add a slide' button, a list of slides (currently one), and a configuration area for the selected slide. A red arrow points to the 'Select an image' button. Other options include 'Display' (set to 'Image'), 'Caption' (set to 'This is a bridge'), and 'Alignment' (set to 'Default').

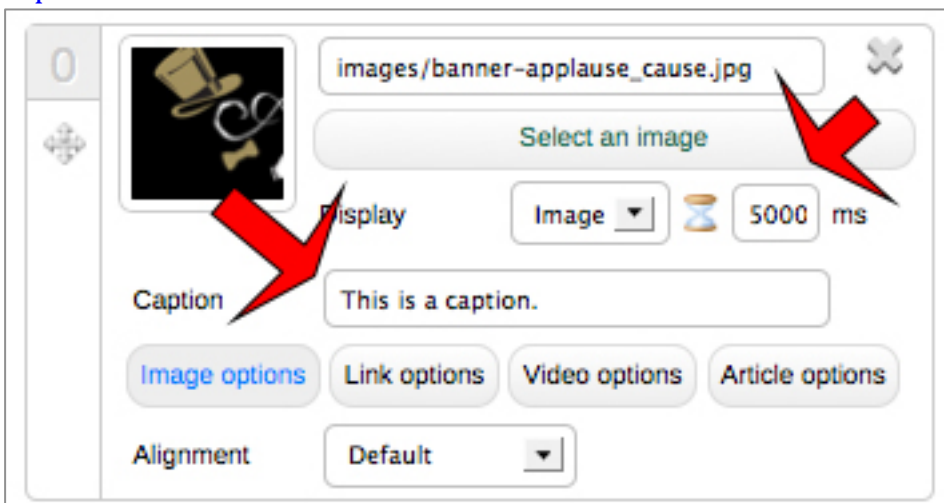

- ↳ Scroll to the bottom of the window and click on the [Browse](#) button. Browse to your image file. Click on the [Start Upload](#) icon. You will then see your image appear in the top window.

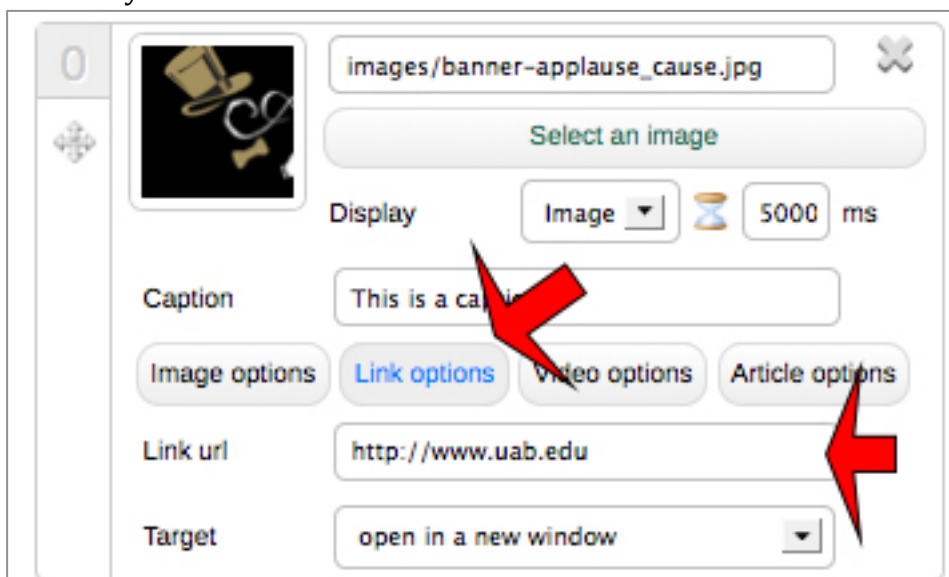

- ↳ Click on the uploaded image. This will automatically fill in the Image URL for you. Scroll down, fill in a [Title](#) and [Description](#). Click in the [Insert](#) button to insert the image into a slide.

- ↳ Next, set the [slide transition time](#). I'm going to enter 5000ms to display the slide for approximately 5 seconds (or skip this step to default found in Effects options). Enter a [Caption](#).

- Under the **Link options** button, enter a **URL**. If opening content outside your domain, you may want to open in a new window from the **Target** drop down. Continue to add as many slides as you wish.

### How to configure the slideshow responsive design

In this example, my banner images are the standard banner width of 972px and a height of 250px. The height will need to be entered as a percentage to accurately shrink down on mobile devices. This requires a quick calculation.

Here is the formula: **Height divided by width = a decimal**. Move the decimal over two spaces to the right and have your **percent** to use for the **height**.

So, in this example, we have the following calculation to arrive at the needed percentage:

<b>250 ÷ 972 = 0.2572</b>	<b>0.2572</b>	<b>25.72%</b>
<b>Height / Width = Decimal</b>	<b>Move decimal 2</b>	<b>Percentage</b>
	<b>spaces to the right</b>	

### Common height percentages for UAB Joomla site banners:

Height px	Width px	Height Percentage
150	972	15.43%
175	972	18.00%
200	972	20.57%
225	972	23.14%
250	972	25.72%
275	972	28.29%
300	972	30.86%
325	972	33.43%
350	972	36.00%
375	972	38.58%
400	972	41.15%

- Click on the **Styles options**. Enter the actual **width** in px. Enter the **calculated height percentage**.
