**COURSE DESCRIPTION**

**CALCULUS III**

**MA 227–6D, FALL 2016**

DEPARTMENT OF MATHEMATICS

UNIVERSITY OF ALABAMA AT BIRMINGHAM

---

**Course Instructor:** Dr. Henghui Zou  
**Office:** CH 480B  
**Phone#/Email:** (205) 934-2154, zou@uab.edu  
**Office Hours:** After class, or by appointment/drop in

---

**Meeting times:** MW 2:30-4:20PM.  
**Meeting location:** HHB221  
**Prerequisite:** Grade of C or better in MA 126 or equivalent  
**Credits:** 4 semester hours  

---

**Important dates:**  
**First day of classes:** Monday, August 29, 2016.  
**Labour Day:** Monday, September 05, 2016.  
**Last day to withdraw:** Thursday, October 21, 2016.  
**Fall/Thanksgiving break:** November 21 - November 25, 2016.  
**Last day of classes:** Friday, December 09, 2016.  
**Major exams:**  
- Test 1: Tuesday, October 04, 2016;  
- Test 2: Thursday, November 17, 2016.  
These dates are tentative.  
**Final exam:** Wednesday, 12/14/16, 1:30–4:00PM (room to be announced).

---

**Course policies:**  
* Please make sure that you are able to receive e-mail through your Blazer-ID account. Official course announcements may be sent to that address.  
* If you wish to request a disability accommodation please contact DSS at 934-4205 or at dss@uab.edu.  
* The two lowest homework grades will be dropped to account for any missed assignments due to illness or any other circumstance.  
* If a test is missed due to a serious verifiable circumstance or official university business, the test grade will be replaced with the properly rescaled final exam score. You have to advise the instructor of such circumstances at the earliest possibility.

---

*Date:* August 22, 2016.
• No books or notes will be allowed during any of the tests. If you need a basic formula, just ask me.

Methods of teaching and learning:
• 27 class meetings of 110 minutes consisting of lectures and discussions of examples and homework problems. Time for two in-class tests is included.
• Students are expected to undertake at least 8 hours of private study and homework per week.
• The online homework system WebAssign will be used (see below).

Aims of the course:
Upon successful completion of the course a student
• can apply one-dimensional calculus techniques to vector-valued functions;
• can apply the calculus of vector-valued functions to treat motion problems;
• understands basic concepts and applications of multi-variable calculus;
• can solve standard optimization problems;
• can use different coordinate systems to solve two and three dimensional integration problems; and
• knows when and how to apply important concepts from vector analysis.

The understanding of a concept is demonstrated by an ability to solve pertinent problems related to that concept.

Course content:
• Cylinders and quadratic surfaces
• Vector functions: continuity, derivatives, and integrals
• Parametric curves and surfaces, polar coordinates
• Functions of several variables: continuity and partial derivatives, gradient, directional derivatives
• Linear approximation
• The chain rule
• Optimization
• Double and triple integrals
• Iterated integrals
• Integration using polar, cylindrical, and spherical coordinates
• Change of variables
• Line and surface integrals (including surface area)
• Curl and divergence
• The integral theorems of Green, Stokes and Gauss

Assessment procedures:
• Student achievement will be assessed by the following measures:
  − Regular online homework. Typically, homework will be due one week after assignment. Feedback is provided when wrong answers are given. Students are encouraged to retake the homework problems (with randomly changed parameters) until they obtain correct answers. An unlimited number of takes is allowed during the week in which the set
is available. Homework contributes 25% to the course average. Problems on tests are modeled after homework problems. Staying on top of homework is therefore extremely important.

- Two 110-minute in-class tests. Each test contributes 20% to the course average.
- A 150-minute comprehensive final examination. The final contributes 35% to the course average.

- Your course performance is the maximum of your course average and your final exam grade, each being a number between 0 and 100.
- Your final grade is determined according to the following table:

<table>
<thead>
<tr>
<th>Course performance:</th>
<th>88-100</th>
<th>75-87</th>
<th>62-74</th>
<th>50-61</th>
<th>below 50</th>
</tr>
</thead>
<tbody>
<tr>
<td>Final Grade:</td>
<td>A</td>
<td>B</td>
<td>C</td>
<td>D</td>
<td>F</td>
</tr>
</tbody>
</table>

Tips:

- Help is available in the Math Learning Lab (HHB202), if you can’t find me.
- By working steadily and regularly, you will increase your chances to succeed in this course.
- Remember, being a full-time student is a full-time job.

How to get started on Enhanced WebAssign:

1. Go to www.webassign.net and click on LOGIN on the left on your screen, and then click on I HAVE A CLASS KEY.
2. Enter the following course key:

   and proceed; enter uab if prompted for your institution.
3. When prompted to purchase an access code, select “. . . trial period” (you do not need to purchase an access code at this time. However, you must purchase an access code within two weeks to continue using the system beyond the two-week trial period. The system will prompt you to enter your access code when the deadline approaches.)
4. After your first registration, you can sign in as a returning user.
5. Should you run into technical problems Enhanced WebAssign provides technical support online and by phone.
