AS ONE OF THE NATION’S LEADING TEACHING HOSPITALS, UAB has a long history of providing excellent training to nursing professionals. Many UAB nurses got their start through the RN Internship program—in fact, you may meet nurses who started as interns over 25 years ago and have continued their careers at UAB because of the exceptional opportunities it affords.

Our esteem for the nursing profession is reflected in the prestigious Magnet Certification for Nursing Excellence, which UAB Hospital’s Department of Nursing received in 2002.

In UAB's unique six-month internship program, you will experience six different nursing units, each with its own specialized focus and stimulating environment. If you are already dedicated to nursing, but have not yet identified your calling within the field, the RN Internship may be right for you.

At UAB Hospital, there are over 40 nursing units with specialized nursing care. Explore your options!

**Acute Care/Critical Care RN Internship**
In the Acute Care/Critical Care RN Internship, you will select from nursing units where patient populations are narrowly defined. You can choose to work with patients throughout the care continuum of a specific service line or sample diverse patient populations by working on six vastly different units, each for one month. Each RN Internship will include class time to supplement and support your development as a new nurse.

Each RN intern will be asked to choose four (4) Acute Care Units plus two (2) Critical Care Units, or six (6) Acute Care Units:

**Acute Care Units**
1. Burn Step-Down
2. Mixed Medical and Surgical
3. Oncology and Hematology
4. General Medicine, Infectious Disease, Diabetes
5. Neurosurgery
6. Neurology
7. Nephrology and Endocrine
8. Orthopedics and Joint Replacement Center
9. ENT; Plastics; Urology
10. General Surgery
