

# Alabama Middleware Workshop

---

Sponsored by UAB and the NSF/Alabama  
EPSCoR Internet2 Initiative, Grant No. 0091853.

# Selected UAB Directory Enabled Applications

---

- ResNet Network
- Software Distribution Application

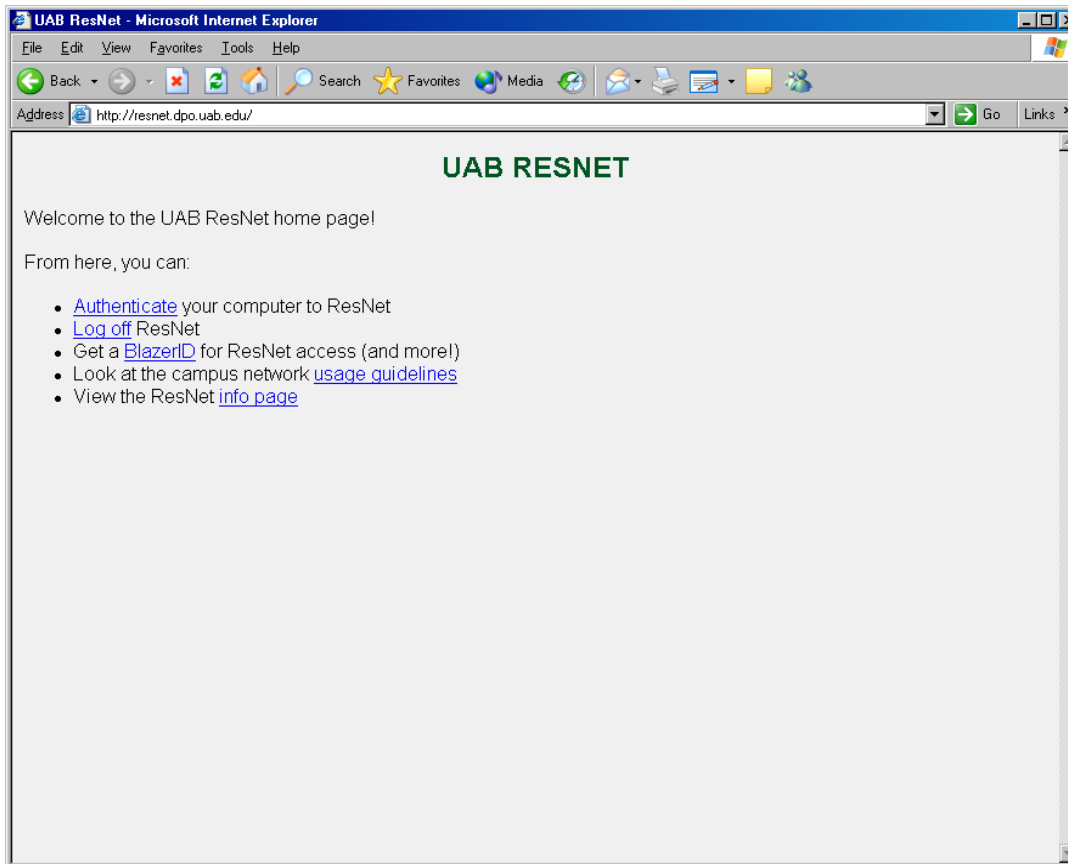

# ResNet Network

---

- Provides authenticated network access from the Residence Halls
- Only active UAB community can access the network
- Provides audit trail

# UAB ResNet Login Step 1

# UAB ResNet Login Step 2

**RESNET AUTHENTICATION**

Hello!

You will need to supply your BlazerID (or UAB Electronic Phonebook alias) and password in order to authenticate for Internet access. If you are a summer dorm occupant, your BlazerID is the letter 'x' followed by your room's telephone number (for example, **x9961212**) with the password **welcome2uab** (if your room does not have phone service, then you do not have network access.) Otherwise, if you are a UAB student and do not yet have a BlazerID, please [go here](#) to sign up for one.

Enter your BlazerID/alias and password below:

BlazerID:

Password:

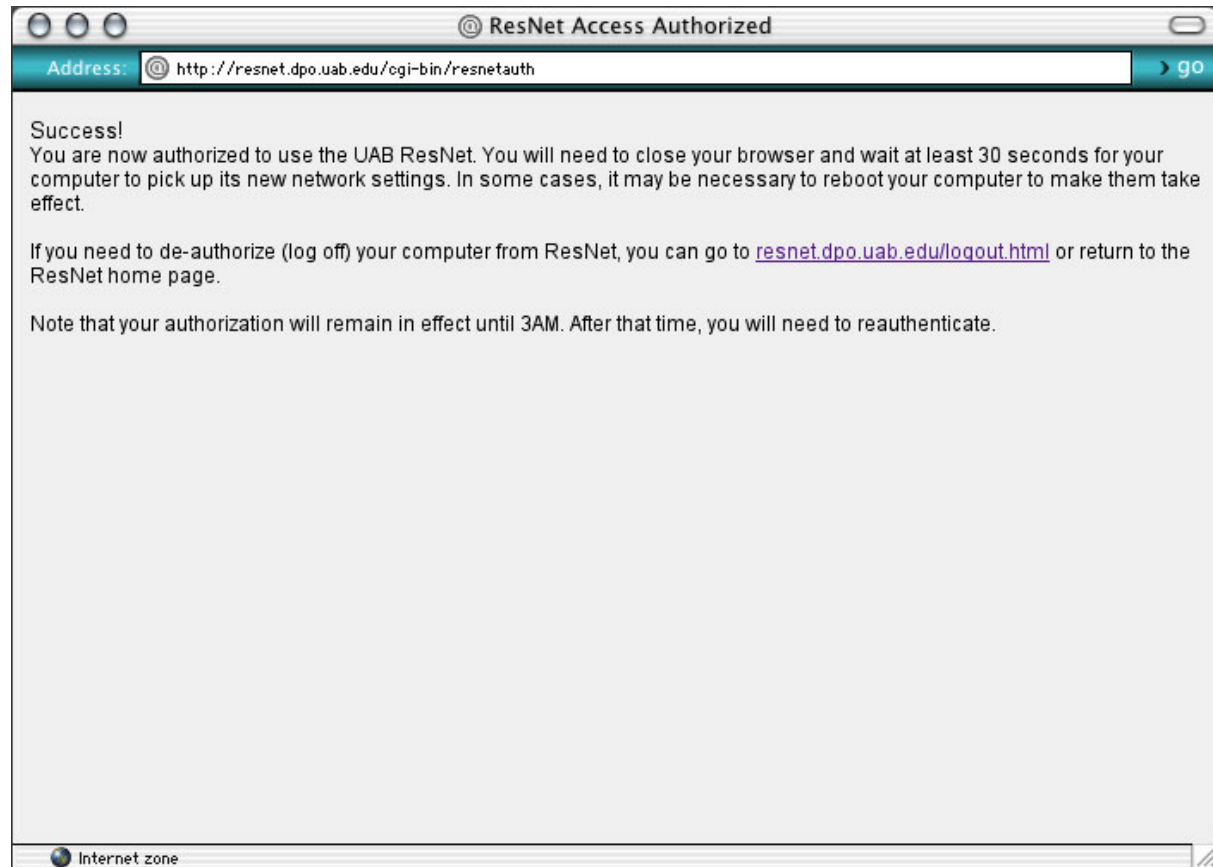

Check here if you will be the only person using this computer and do not wish to go through this sign-on again (but see [warnings below](#).)

---

If you are going to be the only person using this computer, you may place a checkmark in the box above to make this authentication permanent. You will not have to sign in again as long as you continue to be a resident of UAB Student Housing. **Be warned**, however, that you will be solely responsible for any improper activity originating from this computer, regardless of who else may use it (friend, roommate, visiting relative, etc.) There will be absolutely no exceptions to this policy.

# UAB ResNet Success

# Software Distribution

## Application

---

- Goal: Provide easy ability for UAB community to download licensed software.
- Allow users to download certain software from home.
- Track software download to comply with licensing agreements.

# Benefits of Directory Enabled Applications

---

- One username and password for users to remember
- Enabling and disabling user accounts happens automatically as part of central process
