

Tuesday Tip

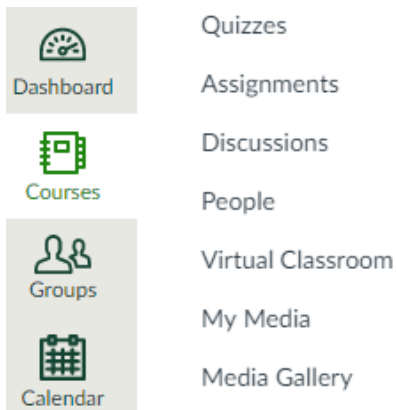

Love Your Storage: Part 3

This is the final installment of our review of your cloud storage options.

Are videos in your course and on your hard drive taking up too much space? Kaltura can help! But why should you use Kaltura?

1. Analytics - Kaltura provides data on which students are watching your videos, how many times they're viewed, for what length of time, and more!
2. Video Quizzes - insert quiz questions into your video. Grades can even be automatically added to your gradebook.
3. Collaboration - share videos with other faculty by adding [collaborators](#).
4. Storage, of course!

Upload videos through your [My Media](#) tab.

Then embed them in any course. For a quick overview of Kaltura, watch this [video](#).

Would you like the ISS team to share more about this and other technologies at your next department or program meeting? [Email](#) us at with the time and location of your next meeting, as well as what you would like us to cover!
