

Denmark

Exploring Sustainability in Copenhagen

The course provides an overview of the culture, history and economy of Denmark and surrounding region from an environmental economics perspective. The starting context for study is Copenhagen, Denmark – the first capital city to declare their intention to be carbon-neutral by 2025. Students gain awareness and understanding of the people and business climate of this region and the reasons why it has become the hotbed for innovation in green technology and design. Students then compare policy there to the United States.

APPLICATION DEADLINE: AUGUST 1, 2023
