COURSE DESCRIPTION
CALCULUS II
MA 126–6C, FALL 2018

DEPARTMENT OF MATHEMATICS
UNIVERSITY OF ALABAMA AT BIRMINGHAM

Course Instructor: Professor Ian Knowles
Office: CH481A
Phone#: (205) 934-2154
E-mail: iknowles@uab.edu
Office Hours: Before and after class; you can also phone or email for an appointment.

Meeting times: MW 12:20-2:10pm.
Meeting location: HBB124.
Prerequisite: Grade of C or better in MA 125 or equivalent.
Credits: 4 semester hours.

Important dates:
First day of classes: Monday August 27, 2018.
Last day to drop/add classes: Tuesday September 04, 2018.
Last day to withdraw with a “W”: Friday October 19, 2018.
Fall/Thanksgiving Break: November 19–November 25, 2018.
Last day of classes: Friday December 07, 2018.

Major tests:
Test 1: Wednesday September 19, 2018; 10.1-10.5, 10.7;
Test 2: Wednesday October 10, 2018; 4.1-4.5, 5.6, 5.8;
Test 3: Wednesday October 31, 2018; 6.1-6.3, 6.6, 7.1-7.2, 7.6;
Test 4: Wednesday November 28, 2018; 10.8, 8.1-8.7.

The above dates and relevant sections are tentative; precise dates and test section numbers will be announced in class at least one week before a test.

Final exam: 1:30-4:00pm Wednesday December 12, 2018; room to be announced.

Date: August 27, 2018.
Course policies.
- Please make sure that you are able to receive e-mail through your Blazer-ID account. Official course announcements may be sent to that address.
- If you are contacted by the Early Alert Program, you should consider taking advantage of the services offered. These are listed in the Student Resources section of the Blazernet website.
- For disability accommodations contact DSS at 934-4205 or at dss@uab.edu.
- The two lowest weekly homework grades will be dropped to account for any missed assignments due to illness or any other circumstance.
- If a test is missed due to a serious verifiable circumstance or official university business, the test grade will be replaced with the properly rescaled final exam score. You must advise the instructor of such circumstances at the earliest possibility before the exam takes place.
- While (non-internet) calculators are permitted, no books or notes will be allowed during any of the tests, with the exception that you are permitted to bring to each of the tests and the final one standard size ($8.5'' \times 11''$) summary sheet. If you need a basic formula, just ask me.

Methods of teaching and learning.
- 27 class meetings of 110 minutes duration consisting of lectures and discussions of examples and homework problems. Time for four in-class tests is included.
- Students are expected to undertake at least 10 hours of private study and homework per week during the term.
- The last half of the Wednesday class is devoted to a weekly in-class tutorial designed to provide you with one-on-one assistance with the homework assignment for the week. The assignments are always due on Friday of each week. Late submissions will be graded for correctness, but will not count toward the course score.

Aims of the course.
Upon successful completion of the course a student
- understands the concept of a vector, can perform basic vector calculations, and is able to use vectors to describe lines and planes in space;
- understands the concept of vector-valued functions, and is able to use vector functions to describe parametric curves, tangent vectors and velocity;
- understands the concept of definite integral;
- is able to apply the definite integral to find volumes, work, and arc length;
- knows the basic techniques of integration;
- is able to apply Calculus concepts to problems in Physics and Engineering;
- is able to determine the convergence/divergence of improper integrals, sequences, and infinite series; and
- can find power series representations of functions and use them for approximation, evaluation of integrals, and limits.

The understanding of a concept is demonstrated by an ability to solve pertinent problems related to that concept.
Course content.

- Vectors in three dimensions, their geometric and algebraic representation, dot product and cross product.
- Equations of lines and planes.
- Vector-valued functions and parametric curves, tangent vectors, velocity and speed.
- Riemann sums, the definite integral, area and distances.
- The fundamental theorem of calculus, indefinite integrals and antiderivatives.
- Basic techniques of integration including substitution, integration by parts, partial fractions and the use of tables.
- Applications of integration (area, volumes, arc length).
- Applications to Physics and Engineering.
- Sequences and series, power series.

Assessment procedures.

- Student achievement will be assessed by the following measures:
  - Regular graded homework. Written homework will be assigned on Monday of each week and due on Friday of the same week. Homework contributes 35% to the course average. Problems on tests are modeled after homework problems. Staying on top of homework is therefore extremely important.
  - Four 50-minute in-class tests. Each test contributes 10% to the course average.
  - 150-minute comprehensive final examination. The final is comprehensive and contributes 25% to the course average.
- Your course performance is your course average, which is a number between 0 and 100 obtained by adding the weighted scores from the homework, tests, and final.
- Your final grade is determined according to the following table:
  - Course performance: 88-100, 75-87, 62-74, 50-61, below 50
  - Final Grade: A, B, C, D, F
- After the final exam score and grades have been entered, grades may be checked via https://www.uab.edu/cas/mathematics/resources under the heading Check Grades.

Tips.

- Help is available in the Math Learning Lab (HHB202), if you can’t find me.
- Working steadily and regularly attending class increases your chances of success.
- Remember, being a full-time student is a full-time job.
