

Project Narrative

The multidisciplinary UAB Immunology Training Program, "Immunologic Diseases and Basic Immunology", is focused on training highly motivated pre-doctoral students and PhD and MD graduates in the fields of translational and fundamental immunology. Our trainees are selected for their commitment to research and academic medicine. The success of their future investigator-initiated studies, which are best represented by R01-caliber projects, requires the development of skilled creativity and the ability to identify and achieve scientific goals of significance to the biomedical research enterprise.
