

# UAB ENDODONTICS INTEREST GROUP

## IS YOUR FUTURE IN ENDODONTICS?

Endodontic treatment has remained the only treatment available to save the natural tooth from hopelessly being extracted. That being said, advances made over the last 30 years have allowed us to assure patients of predictable success at a rate beyond 95%.

Considering the promising future of Endodontics, we want to offer supplemental information about the specialty in order to help those interested to decide whether endodontics is right for them!
