

Effective December 5, 2012

Do you work with quantities of Abrin, Botulinum neurotoxins, Conotoxins, Diacetoxyscirpenol, Ricin, Saxitoxin, Staphylococcal enterotoxins A-E, Tetrodotoxin or T-2 toxin that have to date been excluded from regulation?

If so, you need to read the notice below very carefully.

Changes in select agent regulations now require researchers, vendors, suppliers, and others who possess to conduct due diligence before transferring these toxins to others. If you currently work with or plan to work with any of these toxins, check here to find out how you may be affected:
