# iProcurement: Creating GL Account & Object Code Combinations

GL account and object code combinations **must** be created before they can be used on a requisition. An indicator that the creation of a combination is required is when the entered combination **does not yield any results**.

Once the combination is created, you can use the account alias and object code on future orders.

1. **On the UAB_AKF screen,** enter the full GL account string, including the object code.

2. **Under Results,** click **Create**.

3. **Go to Results** and click the **Select** radio button.

4. **Click Select.**
