

Microbiology Theme Presentation Class - Speaker Evaluation

Speaker _____

Evaluator ___ Student ___ Faculty

Evaluate the following areas of the talk for their quality and/or quantity. I've provided some possible descriptors for these categories, but you can use others (and it is always useful to give some specific comments that would help the speaker improve the talk).

Quality - excellent, adequate, needs improvement

Quantity – too much, too little, just right

	Quality	Quantity
Background information		
Presentation of hypothesis(es) and rationale(s) for studies		
Explanation of methods		
Presentation of results		
Interpretation of results - (i.e., did speaker explain what results mean and how they fit into bigger picture)		
Conclusions/Future Directions		
Slides		

Delivery – could the speaker be heard? Is he/she an effective speaker?		

What was the best thing about the talk? What needs the most improvement?

Overall, do you feel that you understood the talk? If not, what would have helped you understand it?

Overall, how do you rate the talk (letter grade or any other scale you want to use).
