How do I clear the browser cache in Internet Explorer?

1. Open an instance of Internet Explorer and click on the Tools menu in the Command bar.

2. On the Tools menu, click Internet Options. The Internet Options window will open.

3. Click on the General tab.

4. Locate the Browsing history settings section and click the Delete button to open the Delete Browsing History window.
5. Place a check in the **Temporary Internet files** box and then select the **Delete** button. A pop-up window with a progress bar will briefly appear as the temporary files are deleted. The Delete Browsing History window will close after the process is completed.

6. Go back to the General tab on the **Internet Options** window and select **Settings** in the Browsing history section. This opens the **Temporary Internet Files and History Settings** window.

7. Under **Check for newer versions of stored pages**, click the **Every time I visit the webpage** radial button.

8. Click OK to close the **Temporary Internet Files** window.

9. Click OK to close the **Internet Options** window.
