

Transporting Patient to OR for C/S from L&D Covid-19 Positive or PUI

- Clear and constant communication should occur at all times between OB, anesthesia, and nursing
 - Consider earlier surgical intervention and early notification in an effort to avoid STAT cesarean delivery
 - OR nurses, Surgical Techs and Anesthesia should move to the OR once notification for a C/S is called and don mask, face shield, gown and gloves prior to patient entering the room.
 - **PATIENTS NEEDING A C/S WITH GENERAL ANESTHESIA IN L&D:
***We have 30 minutes to perform a STAT C/S per guidelines. Please make all decisions and movements intentionally to provide the safest care and reduce risk of contamination.**
- Due to the nature of L&D, there is no designated COVID-19 operating room; however, OR 3 will be used if available
 - The supply cart outside of the patient's labor room will be moved with the patient
- Neuraxial anesthesia is preferred for any patient, including COVID-19 patients
 - Labor epidural activation to surgical block or spinal anesthesia
 - Providers should not don PPE to enter labor room for a level check. Level check to be completed once the patient is in the OR.
- PPE for transport
 - If patient requires assistance from the bed to the wheelchair or stretcher, transporting staff should wear all recommended PPE (gloves, gown, surgical mask, eye protection (goggles or face shield))
 - A surgical mask and clean sheet should be placed on the patient for transport.
 - If the nurse has time, all high touch surfaces of the bed should be wiped down with a sani-wipe.
 - Yellow Gowns and gloves (NOT face shield and mask) should be removed before leaving the room by providers, perform hand hygiene and new gloves donned to transport patient.
 - Only ONE person should touch the bed for transport.
 - The SL/ANM should close the doors in the hall, remove anyone from the hallway and badge through or push all doors for the transporter.
 - The SL/ANM will also take the PPE cart to the OR for use as needed. Extra gown and gloves will be in OR's also
 - ***put on a clean gown if there is anticipation to provide care during transport (i.e. bagging a patient)*
- Receiving OR
 - OR nurses, Surgical Techs and Anesthesia should move to the OR once notification for a C/S is called

- Don proper PPE with observer verifying
 - Impervious Gown for airway team (yellow isolation gown or higher)
 - Long cuffed gloves
 - Second set disposable gloves
 - N95 mask
 - Bouffant hat
 - Eye shield
- Normal glove use should be performed for OR RN's.
- There should be a printed copy of the PPE donning and doffing process placed on the OR door.
- There should be a copy also placed on the WPACU isolation room door.
- Do not depend on someone's memory to get all the details!
- Once patient enters the room, have the patient perform hand hygiene, remove the sheet and provide a clean blanket.
- Transporter should give report to the OR RN, change gloves, perform hand hygiene, don new gloves, sani-wipe the bed, return the bed to the room and return to the OR.
- The Transporter will become the Runner for the OR and should remain outside of the OR throughout the case.

- **For the Anesthesia Team-Refer to Cesarean Section OR Management**

- FOR PEDS and NBN:

- The provider catching the baby in the OR should enter the room only after the patient has been intubated then quickly gown and glove (**mask**)
- The infant should be resuscitated in the OR hallway.
- There should be a limited number of care providers in the OR hallway for resuscitation, all should be wearing recommended PPE.
- The DCT RN should not go through the occupied OR to receive the baby.
- The DCT RN should follow protocols for transporting a PUI infant to the Isolation nursery and bring the crib to the OR hallway for hand off

- Post-op Transport

- When patient is ready to be transported to WPACU, notify WPACU team, allow for Runner to clear hallways and press all buttons.
- Anesthesia transporter should remove gloves, perform hand hygiene and don clean gloves to transport.
- WPACU 1 should be used for these patients.
- Runner should Roll PPE cart to outside of WPACU room 1.

UAB OB TRANSPORTING C/S TO L&D OR

- Patient should be transported from the OR table to the stretcher and remain intubated if general-**Filter in place at all times.**
- These patients should be transported to WPACU while remaining intubated and should be extubated with two Anesthesia providers in the WPACU 1 room.
- Extubation is a High Risk portion-High Risk PPE needed- **Refer to Cesarean Section OR Management**
- 1 WPACU RN should be assigned to this patient with the 2nd WPACU RN as the relief.
- All PPE including a surgical mask, face shield, gown and gloves should be donned to care for these patients.

- Post WPACU room 1 transport to MBU

- If patient requires assistance from the bed to the wheelchair or stretcher, transporting staff should wear all recommended PPE (gloves, gown, surgical mask, eye protection (goggles or face shield))
- A surgical mask and clean sheet should be placed on the patient for transport.
- If the nurse has time, all high touch surfaces of the bed should be wiped down with a sani-wipe.
- Yellow Gowns and gloves (NOT face shield and mask) should be removed before leaving the room by providers, perform hand hygiene and new gloves donned to transport patient.
- Only ONE person should touch the bed for transport.
- The second WPACU RN should close the doors in the hall, remove anyone from the hallway and badge through or push all doors for the transporter.
- Once patient enters the room, have the patient perform hand hygiene, remove the sheet and provide a clean blanket.
