

90 — 90 — 90

AN AMBITIOUS TREATMENT TARGET TO HELP END THE AIDS EPIDEMIC

In December 2014 in Paris, France, UNAIDS released the '90-90-90' Initiative with the goals of:

90% OF ALL PERSONS WITH HIV KNOWING DIAGNOSIS

90% OF THOSE DIAGNOSED ON TREATMENT

90% OF THOSE ON TREATMENT ACHIEVING VIRAL SUPPRESSION

Modeling suggests achieving these targets by 2020 will enable the world to end the AIDS epidemic by 2030, which in turn will generate profound humanitarian, health and economic benefits.

KEY TO THE SUCCESS

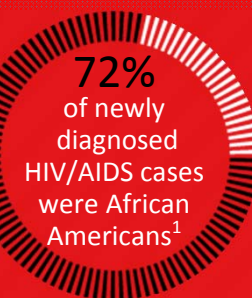

An informed, diverse, empowered, and engaged community is an essential **key to the success** of the initiative. Through active participation at individual-, group-, community-, and structural-levels, our engaged community will provide direction in statewide HIV prevention, treatment, and research strategies. By cultivating these bi-directional, mutually-beneficial relationships between the scientific community and the broader community-at-large, we believe that HIV in Alabama will be eradicated.

Estimated
16,000
total people in
Alabama
are living with HIV¹

2,300 may be
infected and
unaware of their
HIV positive status¹

76%
of new
HIV/AIDS
cases were male¹

72%
of newly
diagnosed
HIV/AIDS cases
were African
Americans¹

51% of new
cases identified
MSM as mode of
transmission¹

The Southern States
accounted for
HALF
of the new HIV Infections
in the United States²

¹ From ADPH 2016 Annual Report

² From CDC 2016 Surveillance Report

**"It will be impossible to
end the epidemic without
bringing HIV treatment to
all who need it."**
