

Accessing UAB Hospital Network Resources through VPN – Windows

If you are receiving these instructions, you have been issued a UABHS remote access token and have been granted approval to use the Cisco AnyConnect application for VPN. If you do not have a token, begin the request process at <https://www.oneuabmedicine.org/web/hsis/technical-support/remote-access-request>.

Step 1 - Download and install the Cisco AnyConnect VPN client -

- Open Internet Explorer -
- Navigate to <https://www.uab.edu/vpn>
- For Windows, choose "AnyConnect Windows VPN Software for 32 and 64 bit systems", for Mac choose "AnyConnect Mac OSX VPN software".
- Your download will begin. When complete, open and run the AnyConnect.pkg installer.
- When presented with Package Name options, uncheck every option except VPN, then continue and complete installation.

Step 2 – Connect using the Cisco AnyConnect VPN client

- Once installed, locate and open the Cisco AnyConnect VPN client
- In the text box, type vpnabmed.hs.uab.edu
- Click “Connect” and enter the following –
 - Username: Username associated with your token
 - Passcode: Previously set PIN followed by the numbers shown on your token (*see token activation instructions provided in email from UABHS sign-on team*)
- A "Connected" screen will indicate a connection has been successfully made

Step 3 – Access Hospital Resources

- Once connected, you can now access the hospital resources you requested remote access to from your off-site workstation in the same manner you do when onsite.
