“Gamification, Patient Reported Outcomes, and Patient-Based Metrics”

**Abstract:**
We will discuss research endeavors using three software platforms developed at UAB. The first is Kai-zen-Education which uses gamification to enhance education for patients and clinicians as well as to gauge program-wide competency attainment in the School of Public Health. We will discuss using the Patient-Reported Outcome (PRO) software platform to capture patient reported outcomes and use them for clinical decision making at the point of care. Finally, we will review some foundational work on an app to measure gait speed and sit to stand test results for at home evaluation of patient performance-based metrics.
