The School of Medicine and Biomedical Sciences at the State University of New York at Buffalo invites applications for two tenure-track faculty positions in the Department of Microbiology & Immunology at the Assistant, Associate, or Full Professor level. The first position seeks an investigator with expertise in Microbial Pathogenesis with a preference for those studying bacterial pathogens and the second position targets an individual studying any aspect of Immunology in relation to host-pathogen interactions.

**Department of Microbiology & Immunology:** The department is strongly research-oriented, with major programs in bacteriology, immunology, mycology, parasitology, and virology. The department has an active research faculty of 17 primary faculty members and a number of adjunct faculty as part of the graduate research program. Most departmental faculty members are also members of The Witebsky Center for Microbial Pathogenesis and Immunology, an interdisciplinary center with its own laboratories in a dedicated research building. The department and associated core facilities are equipped with state-of-the-art instrumentation for genomics, transcriptomics, proteomics, flow cytometry, and microscopy. For more details on the department and the University, please visit: [http://medicine.buffalo.edu/departments/micro.html](http://medicine.buffalo.edu/departments/micro.html).

**Facilities and Research Partners:** Buffalo is home to the Roswell Park Cancer Institute (RPCI) and the Hauptmann-Woodward Medical Research Institute (HWI), which have international reputations in cancer research and structural biology, respectively. The University at Buffalo (UB) has Schools of Medicine, Dental Medicine, Public Health, and Pharmacy, whose faculty collaborate extensively within the University, as well as with faculty at RPCI and HWI. Other institutional resources include the New York State Center of Excellence in Bioinformatics and Life Sciences and the newly constructed Clinical and Translational Research Center on the Buffalo-Niagara Medical Campus. The University is currently in the process of building a new, state-of-the-art medical school in downtown Buffalo which will connect nearby hospitals and research facilities. The Department of Microbiology & Immunology is scheduled to relocate to this new campus in 2017.

**Community Environment:** Buffalo—the City of Good Neighbors—is the second-largest city in New York State. Yet, it’s a big city with a hometown feel. World-class art galleries and museums, a comprehensive citywide system of parks and green space designed by renowned landscape architect Frederick Law Olmsted, and major and minor league sports teams are just a few of the wide array of cultural and recreational elements that make Buffalo such a great place to study, work and live. To learn more about the Buffalo/Niagara Region visit: [www.buffalo.edu/aboutub/region.html](http://www.buffalo.edu/aboutub/region.html).

**Candidate Requirements:** Applicants must have a Ph.D., M.D., D.V.M, D.D.S, or equivalent degree. Individuals who are hired will be expected to maintain an on-site extramurally-funded and productive research program, participate in the teaching at the undergraduate, graduate, and professional levels, and contribute to the various administrative responsibilities of the department. Please note that individuals for appointment to the rank of Associate Professor or Full Professor are expected to have an active research program and both a current and historical record of research funding.

**Application Process:** Applicants should submit a: (1) cover letter, (2) summary of present and future research plans, (3) curriculum vitae, and (4) names/email addresses of three references to: [https://www.ubjobs.buffalo.edu/applicants/Central?quickFind=58205](https://www.ubjobs.buffalo.edu/applicants/Central?quickFind=58205)

Only applications and documents submitted online via the UBJobs site will be accepted.
