

# PROTECT YOUR CHILD FROM MEASLES

Measles is still common in many parts of the world. Unvaccinated travelers who get measles in other countries continue to bring the disease into the United States.

**Give your child the best protection against measles with two doses of measles-mumps-rubella (MMR) vaccine:**

**1st**  
dose at  
**12-15**  
months

**2nd**  
dose at  
**4-6**  
years

## Traveling abroad with your child?

Infants 6 to 11 months old need one dose of measles vaccine before traveling abroad. Children 12 months and older should receive two doses before travel. Check with your pediatrician before leaving on your trip to make sure your children are protected.
