Introduction

A total of 18 (N=18) volunteers participated in the proper ergonomic program. Of those participants, 17 completed the pre-test and post-test surveys.

Quantitative Data:

- The survey questions (Figure 1) were identical for the pre-test and post-test surveys.

Qualitative Data:

- Visual cues were optimal size and placed in multiple locations throughout the food bank.

Results

- Increased likelihood to implement educational training tactics in daily activities.

Discussion continued

A special thanks to:

- Dr. Chris Eidson, my faculty mentor, for his support, guidance, and expertise throughout this process.
- Dr. Gene Rogers, my capstone site mentor, and the volunteers at Alabama Childhood Food Solutions for bringing in the role of OT while serving their community.
- The faculty and staff of UAB’s Occupational Therapy department for promoting excellence and paving the way for future studies.
