Create and present educational materials for Village Mothers who have recently given birth. Analyze clinic data to visualize diagnosis and treatments at Grace Family Clinic in Uganda.

COMMUNITY IMPACT
- My goal was to create an educational manual that teaches mothers how to care for themselves and their newborns from the time they conceive to the 1st year of the child’s life to avoid preventable diseases
- The manual includes education about antenatal care, breastfeeding, nutrition for mother and baby, hygiene, newborn care, and family planning
- There were a total of 8 education sessions with an average attendance of 12 mothers
- Grace Family Clinic serves a large area of patients, and this manual can be used in the future for maternal/child education

I would like to acknowledge Dr. Anna Helova, Katie Adams, MPH, and Grace Family Clinic for giving me this opportunity
